<b>Preface</b>	<b>vii</b>
<b>1 What is Geometric Numerical Integration?</b>	<b>1</b>
1.1 First elementary examples and numerical methods . . . . .	2
1.1.1 The simple harmonic oscillator . . . . .	2
1.1.2 Some elementary numerical methods . . . . .	4
1.1.3 The simple mathematical pendulum . . . . .	8
1.2 The classical paradigm of numerical integration . . . . .	11
1.2.1 Adjoint method, symmetric method . . . . .	14
1.2.2 Stability . . . . .	15
1.2.3 Stiffness . . . . .	16
1.3 Towards a new paradigm: Geometric Numerical Integration . . . . .	17
1.4 Symplectic integration . . . . .	20
1.4.1 A crash course on Hamiltonian dynamics: Hamiltonian systems . . . . .	20
1.4.2 Some elementary symplectic integrators . . . . .	22
1.4.2.1 Symplectic Euler methods . . . . .	22
1.4.2.2 Störmer–Verlet schemes . . . . .	24
1.4.2.3 Geometric properties of the Störmer–Verlet method . . . . .	25
1.4.2.4 Implicit midpoint and trapezoidal rules . . . . .	27
1.5 An illustration: the Kepler problem . . . . .	28
1.5.1 Error growth . . . . .	29
1.5.2 Efficiency plots . . . . .	31
1.6 What is to be treated in this book (and what is not) . . . . .	35
1.7 Exercises . . . . .	39
<b>2 Classical integrators and preservation of properties</b>	<b>41</b>
2.1 Taylor series methods . . . . .	41
2.2 Runge–Kutta methods . . . . .	43
2.2.1 Introduction . . . . .	43
2.2.2 General formulation . . . . .	45
2.2.3 Collocation methods . . . . .	47
2.2.4 Partitioned Runge–Kutta methods . . . . .	48

2.2.5	Runge–Kutta–Nyström methods . . . . .	50
2.2.6	Preservation of invariants . . . . .	51
2.3	Multistep methods . . . . .	52
2.3.1	A general class of multistep procedures . . . . .	52
2.3.2	Predictor-corrector methods . . . . .	55
2.3.3	Multistep methods and symplecticity . . . . .	56
2.4	Numerical examples . . . . .	58
2.5	Exercises . . . . .	61
<b>3</b>	<b>Splitting and composition methods</b>	<b>65</b>
3.1	Introduction . . . . .	65
3.2	Composition and splitting . . . . .	69
3.3	Order conditions of splitting and composition methods . . . . .	71
3.3.1	Negative coefficients . . . . .	75
3.3.2	Counting the number of order conditions . . . . .	76
3.4	Splitting methods for special systems . . . . .	77
3.4.1	Near-integrable systems . . . . .	78
3.4.2	Runge–Kutta–Nyström methods . . . . .	79
3.4.3	Modified potentials . . . . .	80
3.5	Processing . . . . .	82
3.6	Splitting methods for non-autonomous systems . . . . .	85
3.7	A collection of low order splitting and composition methods . . . . .	87
3.7.1	General (non processed) methods . . . . .	88
3.7.2	Processed methods . . . . .	90
3.8	Illustrations . . . . .	93
3.9	Exercises . . . . .	99
<b>4</b>	<b>Other types of geometric numerical integrators</b>	<b>103</b>
4.1	Symplectic methods based on generating functions . . . . .	104
4.1.1	A crash course on Hamiltonian dynamics II: Canonical Transformations and Generating Functions . . . . .	104
4.1.2	Symplectic integrators based on generating functions . . . . .	108
4.2	Variational integrators . . . . .	109
4.2.1	A crash course on Hamiltonian dynamics III: Hamilton’s principle and Lagrangian formulation . . . . .	109
4.2.2	An introduction to variational integrators . . . . .	112
4.3	Volume preserving methods . . . . .	116
4.4	Lie group methods . . . . .	119
4.4.1	Linear matrix equations: Magnus expansion . . . . .	120
4.4.2	Numerical schemes based on the Magnus expansion . . . . .	122
4.4.3	Nonlinear matrix equations in Lie groups . . . . .	124
4.4.3.1	Runge–Kutta–Munthe-Kaas (RKMK) methods . . . . .	125

4.4.3.2	Methods based on the Magnus expansion . . .	127
4.5	Exercises . . . . .	129
<b>5</b>	<b>Long-time behavior of geometric integrators</b>	<b>133</b>
5.1	Introduction. Examples . . . . .	133
5.2	Modified equations . . . . .	136
5.3	Modified equations of splitting and composition methods . .	140
5.3.1	Hamiltonian systems . . . . .	142
5.3.2	Some physical insight . . . . .	143
5.4	Estimates over long-times . . . . .	144
5.5	Application: Extrapolation methods . . . . .	147
5.6	Exercises . . . . .	151
<b>6</b>	<b>Time-splitting methods for PDEs of evolution</b>	<b>155</b>
6.1	Introduction . . . . .	155
6.2	Splitting methods for the time-dependent Schrödinger equation	157
6.2.1	Space discretization . . . . .	158
6.2.2	Splitting methods for time propagation . . . . .	160
6.3	Splitting methods for parabolic evolution equations . . . . .	166
6.3.1	The framework . . . . .	166
6.3.2	Parabolic equations . . . . .	169
6.3.3	Integrators with complex coefficients . . . . .	171
6.3.4	Splitting methods for parabolic equations . . . . .	174
6.4	Exercises . . . . .	177
<b>A</b>	<b>Some additional mathematical results</b>	<b>181</b>
A.1	Differential equations, vector fields and flows . . . . .	181
A.2	Numerical integrators and series of differential operators . .	185
A.3	Lie algebras and Lie groups . . . . .	188
A.3.1	Lie algebras . . . . .	188
A.3.2	The Lie algebra of Hamiltonian functions . . . . .	188
A.3.3	Structure constants . . . . .	189
A.3.4	Lie groups . . . . .	190
A.3.5	Free Lie algebras . . . . .	192
A.4	The Baker–Campbell–Hausdorff formula . . . . .	193
	<b>Bibliography</b>	<b>197</b>
	<b>Index</b>	<b>215</b>
